

SHELMERDINE

SECOND NATURE

Beta Grape *Vitis 'Beta'*

Height: 20 feet

Spread: 24 inches

Sunlight: ☉

Hardiness Zone: 3a

Description:

A hardy and functional vine which produces abundant small dark purple fruit, good for jellies or homemade wine; excellent for covering arbors or trellises, trailing walls or along a fence; very vigorous, needs regular pruning to keep in bounds, full sun

Edible Qualities

Beta Grape is a woody vine that is typically grown for its edible qualities. It produces clusters of navy blue round fruit with deep purple overtones which are usually ready for picking in early fall. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Preserves
- Juice-Making
- Wine-Making

Features & Attributes

Beta Grape has rich green deciduous foliage on a plant with a spreading habit of growth. The lobed leaves turn yellow in fall. It produces abundant clusters of navy blue grapes with deep purple overtones in early fall.

This is a dense multi-stemmed deciduous woody vine with a spreading, ground-hugging habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage. This is a high maintenance plant that will require regular care and upkeep, and requires a special pruning regimen to reliably produce fruit; consult a specific reference guide or contact the store for proper pruning techniques. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

SHELME RDINE

SECOND NATURE

Aside from its primary use as an edible, Beta Grape is suitable for the following landscape applications;

- Hedges/Screening
- General Garden Use
- Orchard/Edible Landscaping

Planting & Growing

Beta Grape will grow to be about 20 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it should be planted next to a fence, trellis or other rigid structure where it can be trained to grow upwards on it. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This woody vine is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
