SECOND NATURE

White Eye Flame Garden Phlox

Phlox paniculata 'White Eye Flame'

Height: 20 inches

Spread: 18 inches

Spacing: 15 inches

Sunlight: ☉ ●

Hardiness Zone: 3b

Other Names: Summer Phlox

Group/Class: Flame Series

Description:

Pretty summer blooms of fragrant white flowers with striking red centres; naturally compact plants suitable for containers or small perennial borders; good mildew resistance

Ornamental Features

White Eye Flame Garden Phlox features bold fragrant conical white star-shaped flowers with red eyes at the ends of the stems from early to mid summer. The flowers are excellent for cutting. Its narrow leaves remain emerald green in colour throughout the season. The fruit is not ornamentally significant.

Landscape Attributes

White Eye Flame Garden Phlox is a dense herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

Planting & Growing

White Eye Flame Garden Phlox will grow to be about 16 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 15 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

White Eye Flame Garden Phlox is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
